

Email Submission: David Ariens

Thank you for considering my submission of objection to the proposed amendments to gene technology regulations. I'm of the opinion that any organism, modified in any way under a laboratory setting, should be labeled as a G.M.O. I'm of the opinion that the application of RNA molecules to induce RNAi is gene technology, regardless of its outcomes. Im of the opinion that gene drive G.M.Os should be banned not licenced and regulated. Im of the opinion that this is potentially dangerous technology and should be treated as such.

Yours Sincerely,
David Ariens
