

Email Submission: Bev Pattenden

Submission to the 2016-2017 Technical Review of the Gene Technology Regulation 2001.

It is my will that every single application for genetically modified goods, animals, crops, insects, vaccines, medicines, or whatever comes into the minds of anyone, or any corporation, be rejected by Australia's office of the OGTR. Most of Europe has rejected GMO's, America hates them, and the world is becoming obese, deformed, mutated, maimed because of them. These genetic modifications to all life on the planet are causing untold chaos, and no one really knows where they are going with this. We already have people pulling up genetically modified crops, we have everyone rejecting food with GMOs, if they are told about it, and we certainly do not want them deregulated, so that chaos reigns on earth. Your job is to protect humanity, not destroy it and you will be held accountable for whatever part you play in this. It is my will that you pay close attention to the submissions this time, and listen to the voice of the people, and not ignore them, as you did for the Cholera vaccine experiments on the people in Australia in 2013, for surely the wrath of God will be poured out on the "Destroyers of the Earth" as warned in the scriptures. Revelation 11:18
